

ABSTRACT OF THE DISCLOSURE

A print job creation process includes an image registration step by an image registration management module 22, a template selection step by a template setting management module 23, a layout editing step by a layout editing management module 24, and a print step by a print management module 25. A job interruption module 26 interrupts creation of a print job at any stage in the print job creation process and makes ready for creation of a new print job. A job resumption module 27 is activated at a desired timing to resume interrupted creation of a print job. A job output management module 28 is activated to prepare a file of the interrupted print job and send the file to a job management apparatus 40. A print job creation apparatus 20 activates its job input management module 29 to input the file of the interrupted print job from the job management apparatus 40 and make ready for resumption of creation of the interrupted print job.
